

Spill Management Procedures

This document contains

Background Information on Spills	1
Emergency Spill for Airside Operators	4
Fuel, Oil and Non-hazardous Chemical Spill	5
Toilet Waste Spill (Domestic Only)	5
Biosecurity Spills (Including International Toilet Waste)	7

Purpose

The purpose of this document is to outline the policy in relation to the prevention of spills and detail the correct procedures for airside operators in effective spill management in accordance with the NTA Conditions of Use. Effective prevention and management of spills supports airside safety, protects the environment and prevents damage to apron areas.

How to use this document

- » Use as a staff training resource
- » Single page procedures can be printed from this document for folders and noticeboards

Responsibilities

Spill prevention and response applies to all aircraft operators, handling agents, refuelling companies, engineers and all other airside tenants and their staff operating on Darwin International Airport.

It is every airside operator's responsibility to:

- » avoid spills
- » know the location of airport spill kits
- » provide maintained spill kits within tenancies be trained
- » in spill response
- » efficiently and effectively respond to spills
- » have well maintained equipment to prevent spills

Relevant legislation

Spills pose significant environmental and work health safety hazards. Effective spill response and reporting is a requirement under:

- » NT Work Health and Safety National Uniform Legislation Act and Regulations.
- » Airports Act 1996
- » Airport Environmental Regulations, 1997
- The Biosecurity Act 2015

What is a spill?

It is a spillage of any substance that has the potential to contaminate stormwater or natural ground, damage pavement surfaces, result in a biosecurity incident or work health safety issue.

Substances may include (but are not restricted to):

- » oils and fuels
- » chemicals
- » biosecurity related waste
 - including plant and animal products
 - International toilet waste

» sewage/toilet waste

- Domestic
- International (refer Biosecurity Spill)

Different spills require different procedures

Emergency Spills—Any of the following criteria:

- » discharge into airside drains
- » greater than 100 litres
- » uncontrolled risk to airside operators/aircraft
- hazardous spills could include unidentified or industrial chemicals, biological or radioactive material

Toilet Waste (Domestic Only)

 » sewage waste to be managed with specific materials PPE and waste management (International flights refer Biosecurity Spills)

Fuel, Oil and Non-Hazardous Chemical Spills

» various fuel, oil and chemical spills to be handled with general PPE and specified spill kits

Biosecurity Spills, including International Toilet Waste

- » Spill involving toilet waste or bio waste material subject to Biosecurity control e.g. from International aircraft, managed with specific spill kits, materials, PPE and waste management.
- » In addition to notifying DIA, Biosecurity spills are required to be reported to Department of Agriculture and Water Resources (DAWR) in accordance with the Biosecurity Incident Response Procedures.

Spills Management generally follows these core principles:

- > Stop Flow
- > Notify
- > Make Safe
- > Contain
- > Clean Up
- > Dispose
- > Report
- > Prevent

Definitions/Glossary

Airside

The area inside the security fence of DIA.

Booms (or Socks)

Can be used to contain (or divert) a large spill – usually used in conjunction with Floor Sweep and/or Pads.

Degreaser/Disinfectant

Enviro Wash – product designed to break down the oils and fuels and a disinfectant added for treating waste spills.

Emergency Fuel Shut Off

When activated, they shut off the underground hydrant refuelling system.

Floor Sweep

Absorbent material that quickly absorbs a wide variety of liquids including fuels, oils, and sewage/waste.

Pads – White

Can be used to clean up hydrocarbons – Oil and fuel.

Pads – Grey

Can be used for absorbing hydrocarbons and water based products – note Floor Sweep must be used for toilet waste.

Pillows

Can be used in conjunction with pads, booms or Floor Sweep to absorb spill.

PPE

Personal Protective Equipment – includes, gloves, protective clothing, safety shoes and eye protection.

Spill Trailer

Spill response trailer equipped with water tank, floor sweep, pads, brooms and shovel.

Spill Bin types

Green/Purple Biosecurity spill kit (including International toilet waste)

Green with **White lid** Oil and Fuel spill kit

Green with Grey lid Non-hazardous spill kit

Purple Toilet waste disposal (Domestic)

Yellow All spill waste (except toilet waste)

Emergency Spill for Airside Operators

A spill is classified as an emergency under any of the following circumstances:

- » Poses uncontrolled safety risk to airside operators/aircraft
- » Discharges into airside drains and potentially to Rapid Creek
- » Is greater than 100 litres

	ACTION	RESPONSE Operator	RESPONSE DIA
EMERGENCY FUEL SHUT OFF	STOP FLOW If safe and practical, stop flow (activate Emergency Fuel Shut Off, close valve on equipment, shut down equipment etc).	Action	Assist
2	NOTIFY Notify Safety One of the spill immediately – phone 0402 088 145 . Safety One will contact emergency services and pollution removal contractors as required.	Action	Receive and act
KEEP CLEAR	MAKE SAFE AND KEEP CLEAR Make safe and keep clear if uncontrolled hazards and ensure all non-essential people are kept clear.	Action	Assist
4	PERSONAL PROTECTIVE EQUIPMENT Put on PPE (Minimum: Face shield, gloves, coveralls, appropriate footwear). Ensure no ignition sources.	Action	Assist
5	CONTAIN If safe and practical, contain the spill/leak using floor sweep/pads/booms. Remember to stand upwind, remove ignition sources, avoid breathing fumes.	Action	Assist
6	CLEAN UP Await instruction on clean up from Safety One. Note: clean-up of an emergency spill will most likely involve a specialist third party.	Assist	Action
1	WASH HANDS Wash hands thoroughly immediately after clean-up using disinfectant handwash.	Action	Action
spill management REPORT	REPORT Report spill and clean-up details and forward to DIA .	Action	Assist
9	PREVENT REOCCURRENCE Prevent reoccurrence through undertaking a root cause analysis of the spill.	Action/ Assist	Action/ Assist
10	EXTERNAL REPORT External reporting to federal environment regulator and others as required.	Assist	Action
